

# Certified Welding & Metal Fabrication

Aerospace | Defense | Automotive | Structural Steel  
Steel | Stainless Steel | Aluminum

From prototype to production, our extensive experience includes:

- Aerospace Decking & Slider Decking
- Scaffolding
- Frames
- Platforms
- Work Cells & Perimeter Fencing/Guarding
- Tubular Weldments
- Structural Steel Fabricating
- Stairs & Ladders
- Safety Handrail Systems
- Detail Weldments

Let us put our experience to work for you. (Note: products featured here represent only few of our capabilities.)  
**If it's made of Steel, Stainless Steel, or Aluminum, we can manufacture it!**

**Contact us for**  
high or low production runs.

**Auburn Industries** has years of proven expertise with industrial skid production. We build heavy duty metal skids for inverted power and free systems, as well as overhead power carriers for overhead power and free systems, for the automotive industry. As experienced custom metal fabricators we have manufactured numerous equipment skids and can build skids to meet your unique requirements.

Please feel free to get in touch with us to discuss your specifications.

**SKIDS**  
Automation Equipment

We have been manufacturing custom headers, hydraulic tanks, and hardware for almost three decades. We fabricate to meet the specifications of each customer. Because we manufacture headers for a variety of industries, our process is versatile, ensuring that each project meets our customers' exacting standards. We have extensive tooling capabilities and experience with all metal pipe fitting. This means that we can fabricate just about any header type you can imagine.

We hydro test up to 6,500 lbs upon request.

**HEADERS**  
Automation Equipment

Auburn Industries' design and manufacturing capabilities for precision work holding fixtures is proven and precise. Whatever your requirements, we fabricate to meet your needs. All work holding fixtures are designed to meet customer specifications.

If you need a tool, we can build it.

All critical dimensions in work holding fixtures are verified for accuracy using state of the art laser tracking technology.

## GAS TANKS

Defense

### Stainless Steel gas tanks for military vehicles

Auburn Industries manufactures stainless steel gas tanks and other components for OEM defense contractors for use in military vehicles. Our team of certified welders fabricate, weld, and test components to meet exacting military standards. All gas tanks are pressure tested prior to being shipped for passivation.

## DECKING (AERODECK)

Aerospace Equipment

We are a certified & aerospace approved alternative to your current decking supplier.

### Auburn Industries Universal Decking (Aerodecking) for the aerospace industry

The Auburn Decking series is our effective, durable metal decking solution built with non-skid surfaces for use in a variety of applications where worker access and contouring against irregularly shaped structures is required. Originally developed for use in aircraft docks, the decking is now functioning in a number of other practical applications including: theatrical staging, platforms, stairs, catwalks and bleachers. We have extensive experience and offer a wide range of standard decking sizes. In addition to our standard size profiles, we can always manufacture Universal or Slider Decking fabricated to suit your individual project needs. Available in aluminum or steel, both styles of decking come in non-slip (dimpled) or smooth (metal sprayed) and can be fabricated with non-skid paint. The decking boasts an excellent strength-to-weight ratio and has a minimum amount of open area preventing materials from falling through. Auburn Decking conforms to all applicable Uniform Building codes and OSHA standards.

## SCAFFOLDING

Aerospace Equipment

### Steel Scaffolding

With project complexity ranging from individual planks placed on structural components of an existing construction, to more customized & functional support, we are available to meet all your scaffolding needs. We manufacture heavy duty steel scaffold planks for platforms built to support heavy loads and withstand movement. Scaffolding can be fabricated from a variety of materials, be it galvanized or non-slip (perforated) steel or aluminum, our scaffolding offers long-term corrosion resistance and durability.

### Aluminum Scaffolding

Light and adaptable, aluminum scaffolding offers a high strength-to-weight ratio at cost effective prices with excellent quality & strength and maximum durability. Expect quick assembly and minimum upkeep & maintenance. Our knowledgeable team manufactures scaffolding to meet customer specifications.
